

SAMPLE | ILLUSTRATIVE FIGURES

UK CBAM supplier readiness report

A sample of the kind of report a producer receives. The producer, product and figures below are hypothetical. This is not client work and not a verification opinion.

Producer	Example Cement Works Ltd (hypothetical)
Product	Portland cement, CN 2523 (illustrative)
Prepared for	UK importer of record (hypothetical)

Result

0.82 tCO2e per tonne, calculated (illustrative)	0.95 tCO2e per tonne, default value for comparison (illustrative)	14% below the default in this example
--	--	---

Calculation and evidence

Input	Source in this example	Status
Clinker production	Plant production log	Collected
Kiln fuel use	Fuel invoices and meter readings	Collected
Electricity	Metered supply, grid mix declared	Collected
Process emissions	Calculated from clinker output	Calculated
Allocation to product	Single product line	Documented

Open points

- Confirm the grid mix declaration for the electricity supply.
- Supply the calibration record for the kiln fuel meter.
- Agree the allocation approach with the verifier before the audit.

Next steps

- Close the open points above.
- Commission an accredited verifier, separately from Driftwatch.
- Share the verified result with your UK buyer, who passes it into their filing.

Prepared for independent verification. Driftwatch is not an accredited verifier. To discuss your own products, visit driftwatch.co.uk/contact.
